Description:

People often ask, what is the correct pronounciation of your company TwenT3? and where did the name actually come from? and the answer to both questions are simple.

Firstly, the correct pronunciation is "23"

Second, the name derived from the idea of us bringing life back to, and reviving traditional flat 2D images to produce someting spectacular for each and every individual customer, and for that customer to be able to then use their own images to create their own unique one of a kind 3D lenticular prints.

TwenT3 prides itself on producing unique and multi-purposed lenticular images and products through its ability to provide multiple images on one canvas to businesses and the general public.TwenT3 is one of the few companies that produce all our products with that customised touch for all our customers following their personalised requirements.

Our products can be used indoors and outdoors, on 3D lenticular business cards, photo gifts that are personalised or custom size lenticular prints. Our products save space and add an aesthetic touch to your home using our lenticular products.

At TwenT3, we ensure that we only use premium lenticular lens substrates along with the latest 3D lenticular software to produce the best quality finished lenticular products. TwenT3 aims to ensure all customers products are uniquely produced as we only produce personalized products for all businesses and individual customers.

From an idea a friend and i had to create different types of images and pictures that would be just a little different from the norm and save space in the process, we have come a long way in producing lenticular images.

The idea was to have a product where a customer could choose their own photo's and 3D style's of image they wanted and for it to be personalised and bespoke to them and only them. We are now seeing 3D technology being used more frequently in smart TV's and more and more in cinema, and our vision is to bring 3d lenticular into everyone's home.
